

Md Imran

Software Engineer

Software Engineer with **1+ year** of **experience** in **.NET (C#, ASP.NET Core, .NET 8, SQL Server)** and additional expertise in the **MERN stack (React, Node.js, MongoDB)**. Specialized in building secure, scalable **RESTful APIs** using **Clean Architecture, Entity Framework Core, and Dapper**. Experienced in **JWT authentication, RBAC, microservices**, and **CI/CD**, with working knowledge of **AWS** and **Agile** practices

WORK EXPERIENCE

Software Engineer Shiwansh Solutions

01/2025 - Present

Mohali

Achievements/Tasks

- **Architected and developed scalable RESTful APIs** utilizing **C#, ASP.NET Core** and **Node.js/Express.js**, enforcing **Clean / Onion Architecture** principles to ensure modularity, high performance, and smooth frontend-backend integration
- **Engineered robust database layers and optimized queries** across both relational and NoSQL environments, utilizing **SQL Server, Entity Framework Core**, and **Dapper (Micro-ORM)** for structured data, alongside **MongoDB** optimization and indexing.
- **Designed secure authentication and authorization workflows**, implementing stateless **JWT (JSON Web Tokens)** and strict **Role-Based Access Control (RBAC)** to protect protected API routes and manage secure sessions across diverse web applications.
- **Built and delivered dynamic, full-stack features**, integrating complex backend services with responsive **React.js** components (using Hooks and Context API) to ensure seamless state management and a highly optimized user experience.
- **Implemented comprehensive CRUD operations**, rigorous input validation, and centralized error handling within the API layer, improving overall application reliability and data integrity.
- **Collaborated in Agile/Scrum environments**, leveraging **Git and GitHub** for version control and branch management, delivering production-ready features on schedule while maintaining clean commit histories
- Collaborated in Agile/Scrum environment and utilized **Git/GitHub** for version control and **CI/CD** workflow

EDUCATION

Bachelor of Engineering in Computer Science

RabindraNath Tagore University

07/2021 - 06/2025

8.4 CGPA

Senior Secondary Education (Class XII)

Millat Acedmy, Samastipur

06/2019 - 06/2021

69%

SKILLS

Backend: ASP.NET Core, ASP.NET MVC, Node.js, Express.js
RESTful APIs, .Net Web API, Entity Framework Core, JWT
Authentication, Design Patterns.

Frontend: HTML5, CSS3, Bootstrap, JavaScript (ES6+),
React.js, Redux, Redux Toolkit, Responsive UI Development

Databases: MongoDB, SQL Server, Database Design,
Performance Optimization

Architecture, Cloud & DevOps MERN Stack, Microservices,
Clean Architecture, OOP Principles, MVC Architecture, AWS
(EC2, RDS), CI/CD Pipelines (GitHub Actions), Git, GitHub

PROJECTS

Employee Management System & Shiwansh.com

- Developed a **full-stack Employee Management System** to manage employees, job candidates, and interview workflows with secure **Role-Based Access Control (RBAC)** and **JWT-based authentication**.
- **Details:** Built using **React.js, Node.js, Express.js**, and **MongoDB**, with application **state management using Zustand** and secure authentication handled through **Token-based security**. The module includes an **admin dashboard, candidate tracking, follow-ups**, and **interview scheduling functionality**.
- **Key Features:** **Role-Based Access, Backend integrations, Employee & Candidate Tracking, Secure Authentication**, Performance Optimization.
- Implemented scalable RESTful APIs and **optimized database queries to improve system performance**, data consistency, and secure communication between frontend and backend services.

Tour & Travel Management System –

- Architected and developed a full-stack Tour & Travel Management System using **.NET 8 Web API** and **Angular**, strictly adhering to **Clean / Onion Architecture** principles to enforce a decoupled, scalable, and highly maintainable codebase.
- Engineered high-performance, asynchronous RESTful APIs using **Dapper (Micro-ORM)** and **SQL Server**, significantly reducing database query execution times and optimizing thread usage compared to traditional heavy ORMs.
- Secured the application via **Role-Based Access Control (RBAC)** for Admin and User roles, implementing stateless **JWT (JSON Web Tokens)** for secure API authorization and **BCrypt** for robust password hashing.
- Optimized data retrieval capabilities and UI responsiveness by implementing server-side **pagination, dynamic search, and filtering** for tour listings and customer enquiries
