 India

### PROFESSIONAL SUMMARY

Backend-focused .NET Core Developer with 4+ years of experience designing and building scalable REST APIs and enterprise business applications across Healthcare and Warehouse & Supply Chain domains. Strong expertise in .NET Core 8, C#, SQL Server, Dapper, Azure, and ERP integrations. Experienced in middleware development, Sage X3 and Mantis WMS integration, handheld device connectivity, and CI/CD automation. Known for strong debugging skills, SQL optimization, and delivering stable, production-ready solutions.

### TECHNICAL SKILLS

#### Backend Development:

.NET Core 8, ASP.NET MVC, C#, Web API, Dapper

#### Frontend:

React JS, JavaScript, jQuery, HTML5, CSS3

#### Database:

SQL Server, Azure SQL, Stored Procedures, Query Optimization, Indexing

#### ERP & Integration:

Sage X3 ERP Integration, Mantis WMS Interfaces, Middleware Development, Data Synchronization

#### Architecture & Practices:

REST APIs, Layered Architecture (Controller–Service–Repository), OOP, Design Patterns

#### Reporting:

SAP Crystal Reports, MIS & Operational Reports

### PROFESSIONAL EXPERIENCE

#### Senior Software Engineer

##### Dynarex Technologies, Mohali

March 2025 – Present

- Developing Warehouse & Supply Chain Management System for a US-based client using .NET Core 8 and React JS.
- Designing and implementing scalable REST APIs using layered architecture (Controller–Service–Repository).
- Building middleware applications to integrate Sage X3 ERP with Mantis Warehouse Management System (WMS).

- Configuring record layouts and destination schemas in Mantis for interface-driven data processing.
- Implementing data synchronization workflows between Sage X3, Mantis, and custom backend systems.
- Integrating handheld RF warehouse devices for real-time stock updates, receipt validation, and inventory transactions.
- Developing business logic to synchronize warehouse receipts, stock movements, and container transactions with ERP systems.
- Writing optimized SQL queries and stored procedures to ensure performance and data consistency.
- Implementing CI/CD pipelines using GitHub Actions for automated build and deployment.
- Deploying applications on Azure App Services integrated with Azure SQL databases.
- Debugging and resolving ERP integration issues, interface failures, and production-level transaction mismatches.

---

## **Software Developer**

### **Trio Tree Technologies, Noida**

April 2021 – October 2024

- Developed and maintained modules for a Hospital Management System using .NET Framework and SQL Server.
- Designed RESTful APIs and implemented complex healthcare business workflows.
- Wrote advanced SQL queries, joins, and stored procedures for MIS and operational reporting.
- Resolved live production issues through systematic debugging and root cause analysis.

---

## **PROJECT HIGHLIGHTS**

### **Hospital Management System**

- Built patient, billing, and reporting modules.
- Implemented complex database operations and healthcare workflows.

### **Warehouse Management & ERP Integration**

- Designed APIs for inventory, receipts, and supply chain operations.
- Implemented middleware integration between Sage X3 ERP and Mantis WMS.
- Enabled real-time warehouse data updates through handheld RF device integration.

---

## **EDUCATION**

## **Bachelor of Computer Applications (BCA)**

Indira Gandhi National Open University

### **CORE STRENGTHS**

- **Backend API Design using .NET Core with scalable architecture**
- **ERP & Warehouse System Integration (Sage X3, Mantis WMS)**
- **Middleware Development for cross-system data synchronization**
- **SQL Query Optimization, Indexing & Stored Procedure Performance Tuning**
- **Production Issue Debugging & Root Cause Analysis**
- **RESTful API Development with Clean Layered Architecture**
- **Handheld RF Device Integration for Real-Time Warehouse Operations**
- **Business Logic Implementation for Enterprise Systems**
- **Data Validation, Transaction Handling & Error Logging Strategies**
- **Code Refactoring & Performance Improvement Practices**
- **AI-Assisted Development using Structured Prompt Engineering**
