

Sarbjeet Singh

As a .NET developer, I create dynamic, user-focused applications by integrating robust .NET functionality with intuitive React.js interfaces, paving the way for efficient and forward-thinking software solutions.

EXPERIENCE

Actualisation , Mohali , — Software Developer

May 2025 – Present

Developed and optimized integrations with Simpro, Xero, HubSpot, Outlook, and Calendar, enabling automated data sync, improved connectivity, reduced manual work, and smoother operational workflows across systems.

Groot Software Solutions, Zirakpur — Junior Software Developer

February 2024 - April 2025

Developed features for employee, parts, and asset modules in a .NET + React.js ERP system, enhancing functionality, resolving issues, and improving UI with ShadCN for smooth business operations and workflows.

CS Soft Solutions, Mohali — Junior Software Developer

November 2022 - January 2024

Improved a .NET-based TMS by integrating carrier APIs, enhancing performance, and developing React.js features, ensuring smoother logistics operations, better usability, and efficient system functionality.

EDUCATION

Chandigarh University , Mohali — MCA

jun 2025 - pursuing

Bilaspur University, Chhattisgarh — B.Com

August 2015 - May 2018

Government Higher Secondary School, Korba — 12th

April 2014 - March 2015

H.No. 3, St.No. 17 Dev Colony, Basant Avenue
Ludhiana, Punjab

+91-9039899948

TECHNICAL SKILLS

Programming Languages

C#, JavaScript

Frameworks & Libraries

.NET Framework, .NET Core, .NET Core Web API, React.js, ShadCN

Frontend Development

React.js, ShadCN UI Components, JavaScript

Backend Development

.NET Core, .NET Core Web API , Console App. , Azure Cloud , jira

Database Management

SQL Server, Entity Framework

Web Technologies

RESTful API Development

Version Control

Git, GitHub

LANGUAGES

- English
- Hindi
- Punjabi

PROJECTS

Project Name — *Business Integration Suite*

The Business Integration Suite was developed to support multiple international clients including **TSR Solutions, CAM Group, The Taste of Europe, Techwell, and Aeron Group (Australia)**.

The main objective was to create a reliable and automated integration system that connects different business platforms such as **Simpro, HubSpot, Microsoft Outlook, SharePoint, and Xero**.

The system was designed to handle multiple operations like project tracking, client management, calendar scheduling, document storage, and financial synchronization. Through these integrations, the businesses were able to maintain real-time communication between departments, reduce manual data entry, and improve overall accuracy and productivity.

I built a **.NET Framework console application** that acts as a central engine for fetching, processing, and storing data from these third-party systems. The application communicates with various APIs, retrieves essential information such as customer details, invoices, job records, and meeting schedules, and then saves them into **SQL Server** for reporting and analytics.

The service was **hosted and deployed on Microsoft Azure**, running as a background process to ensure regular synchronization without manual intervention. I also implemented **Azure Blob Storage** to store files, backups, and large data sets, providing secure and scalable cloud storage for business operations.

For each integration, I handled API authentication, request optimization, and error handling to ensure smooth communication between platforms. The system supports scheduled jobs that keep data continuously updated across all systems, allowing business teams to access accurate and current information anytime.

This project required deep understanding of **API integration, cloud deployment, and data management**, along with strong debugging and performance-tuning skills. I worked closely with other developers and technical leads to test and enhance the functionality, ensuring each client's integration met their specific workflow and reporting requirements.

Role:

- Designed, developed, and deployed a **.NET-based console application** integrating HubSpot, Acousoft and Ispring platforms.
- Automated data collection and synchronization between multiple systems, reducing manual effort and improving operational efficiency.
- Configured and maintained **Azure services**, including Blob Storage and background job scheduling for seamless data flow.
- Managed authentication using OAuth and API keys for multiple external services.
- Monitored performance and logs to ensure system reliability, identifying and fixing issues proactively.
- Collaborated with cross-functional teams to plan integrations, troubleshoot issues, and improve system design for scalability.

Technologies Used:

.NET Framework, C#, Azure App Services, Azure Blob Storage, SQL Server, REST APIs, HubSpot API, and, JSON, Postman, and Git.

Project Name — *Axis ERP*

Axis ERP is a comprehensive management system designed for a Singapore-based mechanical company, optimizing business operations through seamlessly integrated modules.

- The system includes a robust HR and Employee Management module that handles Employee Info, Leaves, Pay Slips, Claims, and Advance Payments.
- Most importantly, it features Parts Manager, Asset Manager, Inventory Manager, Engineering Module and Task Manager ensuring efficient oversight of essential resources and streamlined workflows.

Role:

- Developed and implemented new features within the employee management, parts, and asset modules.
- Worked closely with team developers to enhance and debug the .NET-based ERP platform.
- Troubleshooting and resolved issues, contributing to the maintenance and improvement of a reliable and scalable enterprise resource planning solution.
- The frontend is built with React.js, utilizing ShadCN for a modern and responsive user interface, which enhances user experience and ensures intuitive navigation across all modules.
- Designed and styled user interfaces with Shadcn/UI, ensuring a consistent and visually appealing user experience.

Project Name — *ShipCaddie*

ShipCaddie is a robust Transportation Management System (TMS) designed to meet diverse shipping requirements. It empowers users to import, manage, and ship orders from multiple locations while leveraging an unlimited number of carriers and service types to optimize logistics operations.

Role:

- Enhanced and debugged the .NET-based platform to ensure high performance and reliability.
- Designed and implemented new features to expand system capabilities and improve user experience.
- Integrated third-party APIs to enhance functionality with various carriers and service providers.
- Troubleshot technical issues and contributed to system maintenance and improvement.
- Developed a responsive and intuitive frontend using React.js, ensuring seamless user experience and efficient system navigation.

Medicine Center, Korba — Senior Assistant (Exports)

July 2018 – February 2022

- Managed the export of medicines to international destinations, ensuring compliance with trade laws and smooth logistics.
- Built and maintained strong relationships with overseas clients, driving consistent orders and customer satisfaction.
- Monitored global pharmaceutical market trends to guide export strategy and identify new business opportunities.
- Participated in **tenders for both private and government organizations**, preparing required documentation, quotations, and technical bids.
- Tracked **project progress and tender status**, ensuring timely submission, follow-up, and completion of all contractual and compliance requirements.
- Assisted in maintaining detailed export records and reports for audits, performance analysis, and future forecasting.
